

The Company With Connections®

The Engineered Solution to Sticks & Stones

# THE ROCK™ Adjustable Incremental Spacer

## THE ROCK™

The ROCK™ is a multi-faceted dimensional spacer engineered to assist with mortar pipe connection, The ROCK™ is a solution designed as an alternative to using sticks, stones or chunks of concrete or brick as a common practice for supporting and controlling the pipe within the structure opening prior to placing the mortar in the annular space.

The ROCK™ addresses the inconsistencies of traditional methods by offering a simple and reliable way to set pipe elevation and ensure proper system flow. This new product provides consistent and affordable support during the construction process, thereby enhancing the efficiency and structural integrity of projects.

## AVAILABILITY

Available for purchase in bulk or packaged in bags with instructions. Bagged quantities will be either (8x) TR-250 or (10x) TR-175, which should provide an adequate number of Rocks to properly support and control multiple pipe connections.

## TESTIMONIALS

Here is what some are saying:

- As a former pipelayer who mortared in lots of pipes into structures, I can tell you that we used lots of sticks, stones and broken chunks of concrete to center the pipe before applying mortar...
- I saw this a couple weeks ago. Great product! This has been an industry need for as long as I can recall....
- The ROCK by A-LOK is a great way to control the pipe in the mortared opening.
- So simple, but a perfect solution.....
- Do your contractors a favor and get the info on THE ROCK so that Fred and Barney can quit using sticks and stones! ROCK ON

## KEY ADVANTAGES

**Precision Engineering** - The ROCK™ is manufactured with precision to create a perfectly measured annular space and allow for consistent mortar joint application.

**Durability** - Constructed from high-quality materials, The ROCK™ becomes a permanent part of your structure with its flow through mortared-in design.

**Versatility** - The ROCK™ comes in two sizes, TR-250 and TR-175 to provide customers with the ability to cover any annular space from 1.00"-2.50" in 0.25" increments.

**Efficiency** - By simply turning it to the desired orientation, The ROCK™ will provide the desired space for the placement of mortar around the entire opening to create a watertight and soil-tight connection.

**Cost-Effectiveness** - A-LOK Products Inc. remains committed to providing cost-effective solutions to our customers. The ROCK™ not only improves construction efficiency but also offers excellent value for your investment.

"The ROCK™" is set to revolutionize the construction landscape, providing precasters and contractors with a tool that combines precision, durability, and efficiency. A-LOK Products Inc. is excited to introduce this product to the market, reinforcing its commitment to be an industry leader in innovation and excellence.
